Hi Tim – I was on a call with ACHD yesterday and the permit manager noted they have a draft permit for Invenenergy. She still needs to review it and plans to send it to us, prior to the public comment period, but in the meantime, I wanted to be proactive and see if you needed anything from the modeling side. Seems you spoke with their modeler previously.

I will keep you posted as I hear more on this permit.

Thanks,  
Amy

Amy,

Just a heads up regarding our call with Allegheny County about the new combined cycle plant they are working on. They had a question regarding PM-2.5 precursor offsets. I'm probably not going to capture their question correctly but they were wondering if precursors count collectively or individually as far as triggering offsets. They have about 94 tpy of VOC emissions and not sure about ammonia and figuring NOx is > 100 tpy. I think they may reach out to us (you) to get an answer.

I also warned them that PA DEP's new rule may impact the plant depending on timing. We can talk next week when you come back to the office.
